

March 20, 2018 - Issue 41

Catch up on the latest from IoT, InfoSec and Tech. This issue includes: IoT Healthcare, ICS malware, AMD vulns, Paypal data sharing, steering wheels falling off and much more...

IoT

[Only](#) 21% of the US insurance providers who said IoT data is important to their strategy actually have a strategy for IoT in place.

An [Uber](#) self-driving car killed a woman in Arizona. The reactions to this should be interesting to watch; regulation, court cases, etc.

The [UK](#) government released a paper called "Secure by Design" to help manufacturers build in security for IoT devices.

[Interesting](#) car security camera called the Owl. It's a two-way camera that records everything that's happening inside and outside of your car.

[Amazon](#) is hiring more developers for its Alexa devices than Google is hiring for everything else.

A [report](#) on the policies, processes and technologies used to protect IoT for healthcare.

The [Triton/Trisis/HatMan](#) malware is the first malware designed to attack

industrial control safety systems.

InfoSec

A US [bill](#) called the CLOUD Act could allow governments to do an end run around the Fourth Amendment.

[POS](#) malware, Prilex, has been adapted to target chip and PIN credit cards.

CTS-Labs, a [security](#) firm with rather dubious motivation, released numerous AMD vulnerabilities while giving AMD only 24 hours to respond before public disclosure. AMD is releasing firmware patches for these vulnerabilities.

The [Cambridge](#) Analytica story continues to evolve with governmental inquiries and potential warrants to raid CA offices. 50 million Facebook users could be affected.

[Paypal](#) released a list of over 600 companies they share customer data with.

[Zenis](#) ransomware encrypts your data and deletes your backups. Yay!

[Millions](#) of Android phones came pre-installed with the RottenSys malware which was disguised as a System Wi-Fi service application. Honor, Huawei, Xiaomi, OPPO, Vivo, Samsung and GIONEE affected.

Tech

[Ford](#) recalled 1.3 million cars because their steering wheels might fall off.

[Porsche](#) and Bugatti are using 3D printing for parts like brake calipers.

[Plattsburgh](#), New York passed an 18-month moratorium on Bitcoin mining in the city due to using more than their monthly allotment of cheap hydroelectric power.

[China](#) will bar people with bad "social credit" from using planes and trains. Or they may have been doing this for a while now.

What I've been up to!

OWASP IoT Project 2018 is revving up with our first #iot-security channel meetup and working on revamped Top Ten lists.

Driving the McLaren 570s around Miami Speedway.
